# Place-Based Education

### What Is Place-Based Education?

Place-based education (PBE) immerses students in local history, heritage, geography, and experiences as the basis for learning about food and gardening as well as other subjects including math, language arts, social students, and science (Promise of Place). This learning model is grounded in the local community context and can take place in rural, urban, and suburban areas. Place-based education connects communities and schools and invites students to become engaged and active citizens. According to the Learning and The Power Of Place Project, outcomes of PBE include increased student engagement, improved learning outcomes, social and emotional learning, improved motivation and persistence, and a positive community impact.

## Why Is Place-Based Education Important for FoodCorps Members?

FoodCorps members engage students in a wide variety of public school contexts across the United States. One objective of hands-on food education is to ensure that a lesson's content and approach is relevant for individual students. Food education is inherently place based because of how climate and seasonal differences affect growing food. A spring rural school garden in the Southwest is extremely different from a spring rural school garden in the Pacific Northwest. The food students eat is also influenced by the local community and traditions. Across the country, communities also have differing socioeconomic pressures,

histories, and values. Despite these differences, it is possible for all students to feel pride in their community and value what makes their place special. By using the place-based approaches described below, hands-on food education can provide a wonderful opportunity to engage students in their place.

# What Are the Principles of Place-Based Education?

The following set of place-based learning design principles can help create place-based learning experiences in any setting:

- Community as Classroom: Communities serve as learning spaces for schools, where local and regional experts, experiences, and places are part of the expanded definition of a classroom.
- Learner Centered: Learning is personally relevant to students and enables student agency.
- Inquiry Based: Learning is grounded in observing, asking relevant questions, making predictions, and collecting data to understand the economic, ecological, and sociopolitical world.
- Interdisciplinary Approach: The curriculum matches the real world where the traditional subject area content, skills, and dispositions are taught through an integrated, interdisciplinary, and frequently projectbased approach where all learners are accountable and challenged.
- Local to Global Context: Local learning

serves as a model for understanding global challenges, opportunities, and connections.

 Design Thinking: Design thinking provides a systematic approach for students to make meaningful impact in communities through the curriculum.

Questions to consider that inform a PBE approach to teaching:

- How can I use the surrounding community and environment to inform my teaching in an age-appropriate way? Have I explored the local community, including its history, economics, politics, ecology, and social dynamics?
- What are challenges the local community faces?
- How have I adapted my lesson to reflect the local community?
- How can I collaborate with other teachers to develop an interdisciplinary lesson?
- Does my lesson allow for student inquiry and ownership?
- Is there an opportunity to engage my students in a service-learning project?
- Do students have an opportunity to help adults with genuine problem solving?
- How can my students become agents of change?
- How are my students involved as school leaders?
- · How can I learn alongside my students?
- Do my students feel a sense of pride in their community as a result of my lesson?

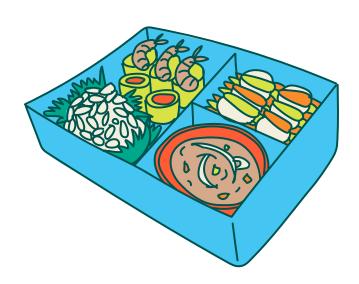

As you plan to lead hands-on experiences with students, keep these principles and questions in mind.
